

### SIZES 2" - 16" (PN 50 - 400) ANSI CLASS 150# to 1500# (PN 16 - 250)

- High Flow Capacities promote reduced body velocity and reduce pressure loss
- Balanced Plug Design provides smooth high pressure control
- Multiple Cage Options for maximum versatility
- Cup Seal with three times the wear surface of competitive valves for long-lasting leak tight seal
- Hardened/Stainless Steel Trim provides twice the service life of 316 stainless trim
- Tighter Shutoff design provides exceptional performance up to Class V
- **Temperature Rating** up to 1,000F (538°C)
- Ultra Compact Actuators install in tight spaces
- Yoke Lock Nut guarantees easy disassembly

#### **MATERIALS**

- Carbon Steel Standard WCC, -20°F to +800°F (-28.9°C to +426.7C), Optional LCC, -50°F to 800°F (-45.5C to +427°C)
- 316 Stainless Steel (CF8M)
- Chrome Moly Steel (WC9)

#### **APPLICABLE INDUSTRY STANDARDS**

See Control Valve Handbook - Reference Section on Page 195

#### **APPLICATION DATA**

- Control systems for Power, Chemical, Petrochemical, Pulp and Paper, Food, & other industries
- HVAC systems
- Feedwater and fuel system controls in boiler rooms
- Packaged systems (OEM) such as heat exchangers, water purification systems & vaporizers, metal cleaning and plating

#### **OPTIONS**

- Multi-Spring, Single-Spring, & Piston Actuators Available
- Threaded, Socketweld, Flanged, Buttweld End, and RTJ Connections
- Positioners (Pneumatic/Electronic/Digital)
- Two-Stage Noise and Cavitation Reducing Trim
- Reduced Flow Cages (0.8, 0.6, 0.4 Factor)
- Alternate Packing sets for Severe Service
- High Temperature Trim

# **D-SERIES CAGE DESIGN (OPTIONS)**

Interchangeable trim and cages offer maximum versatility in flow control applications. Cage variations include:

- Reduced trim which provides capacities of 80%, 60% or 40% of full trim capacity. This feature can be used to control valves body velocities, to plan for future flow expansion, or to correct for oversized conditions.
- Les-Cav cage effectively prevents any valve trim damage due to valve cavitation in either a single-stage or two-stage construction.
- Les-Sonic cage effectively reduces noise at the source in either a single-stage or two-stage construction.

### STANDARD CAGE

The full ported, standard cage provides maximum flow with minimum pressure drop. The inherent linear or equal percent flow characteristic provides excellent low flow control, high rangeability and maximum Cv per inch.

This optional cage reduces the maximum Cv and flow to 80%, 60% or 40% of the normal, full port valve. Used to provide body velocity control, future flow expandability, or to correct for oversized valve conditions.

### ANTI-CAVITATION CAGE

The Les-Cav cage controls the effects of valve cavitation, with single or dual stages, providing a normal valve/trim life expectancy in cavitating conditions. Diametrically opposed holes increase the valves cavitation index (Kc) and direct impinging flow to the center of the cage, preventing mechanical trim/body damage.

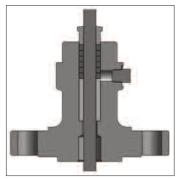

### NOISE REDUCING CAGE

The Les-Sonic cage is designed to reduce fluid generated noise up to 15 - 20 dBA, with single or dual stages, in steam, gas or any compressible fluid service. When used in conjunction with a Les-Sonic silencing orifice, noise attenuation of greater than 20 dBA can be achieved.

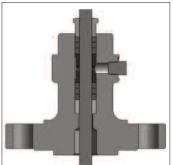

Single Stage / 2 Stages

# **PACKING CONFIGURATIONS**

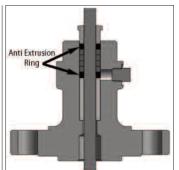

SINGLE PTFE

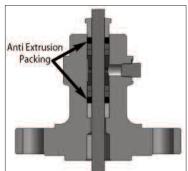

**DOUBLE PTFE** 

Braided PTFE V-ring packing provides the most maintenance free stem seal manufactured from the purest PTFE yarns with an Aramid core. Maximum service temperature is 428°F (220°C).

SINGLE LAMINATED GRAPHITE

DOUBLE LAMINATED GRAPHITE

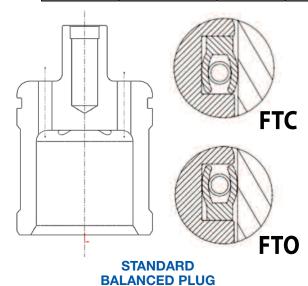

Precision die-cut laminated graphite rings provide a reliable, tight stem seal to operating temperatures of 1000°F (538°C)

# **D-SERIES TRIM MATERIAL SELECTION**

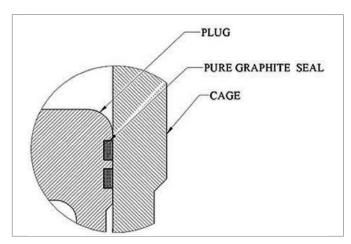

Balanced Plug design allows line pressure under the plug to build up above the plug, effectively cancelling out any unbalanced stem force due to pressure. In addition to providing smooth, high pressure control, balanced plugs allow use of small, light, cost effective actuators. Class IV or V shutoff can be provided.

#### TRIM MATERIAL COMBINATIONS:

Trim Type	Trim	Maximum Service	Plug	Seat Ring	Stem	Plug Seal	Shutoff
Standard Balanced	410 STD	<b>Temp.</b> 800°F/427°C	SS 410 Hardened	SS 410 Hardened	A479 TY316	C300 spring loaded seal 572°F/300°C - Flex Graph. 800°F/427°C	V or IV

High Temp	CA6NM HI-TEMP	1000°F/538°C	ASTM A487 CA6NM (Nitrided)	ASTM A487 CA6NM	ASTM A638 GR 660/Inconel X750	Flex Graph.	IV

Balanced plug design eliminates large stem forces allowing the use of small, responsive, cost-effective actuators. Provides smooth throttling control even at pressures to 1000 psi. Our  ${\bf C300}$  spring loaded seal utilizes a special alloy and inconel spring to provide ANSI class IV or V shutoff to temperatures of 572°F (300°C).

#### HIGH-TEMP BALANCED PLUG

Balanced plug with high-temp carbon seal rings provides ANSI Class IV shutoff at temperatures up to 1000°F (538°C).

### **D-SERIES SPECIFICATIONS**

#### **BODY ASSEMBLY:**

Style: Single seated, top entry, bolted bonnet, globe style body (optional: angle-style), cage-guided balanced plug

#### **SIZE, RATINGS & END CONNECTIONS:**

2" thru 8", Class 150, 300, 600, 900, 1500 RF, RTJ, BWE

#### 10" thru 16" Class 150, 300, 600, RF, BWE, RTJ

#### **BODY/BONNET MATERIALS:**

Carbon Steel, A216 Gr WCC,
-20 to 800°F (-29°C to 427°C)
Low-Temp Carbon Steel A352 Gr. LCC,
-50 to 800°F (-46°C to 427°C)
316 Stainless Steel, A351 Gr CF8M,
-50 to 1000°F (-46°C to 538°C)
Chrome-Moly Steel A217 Gr WC9
-20 to 1000°F (-29°C to 538°C)

#### **BODY/BONNET BOLTING:**

Standard, -20 to 800°F (-28 to 427°C)
ASTM A-193 GR B7 Studs
ASTM A-194 GR 2H Nuts
High Temp, 800-1000°F (427 to 538°C)
ASTM A-193 GR B16 Studs
ASTM A-194 GR 4 or 7 Nuts

#### **STEM PACKING:**

Braided PTFE with Kevlar filaments
Temp. -20.2°F to 446°F (-29°C to 230°C)
Graphite - 2 Anti-Extrusion Ring Graphoil
Temp. -20.2°F to 1050.8°F (-29°C to 566°C)

#### PACKING STUDS, NUTS & FOLLOWER:

300 Series Stainless Steel

#### **GASKETS:**

Body/Bonnet and Seat Ring/Body:

For up to 6" sizes: Spiral Wound 316L/Graphite
1000°F (+566°C) Max.

Above 6" sizes: Spiral Wound 316L/Graphite
449.6°F (232°C) Max.

Flexible Graphite, 1000°F (538°C) Max.

#### **TRIM SIZES:**

Full Port, 80%, 60%, and 40% Reduced Port. Custom Cv: contact Application Engineering

#### **PLUG (PISTON) SEAL MATERIALS:**

C300 spring loaded seal with Inconel Spring -Up to 572°F (300°C). Class IV or V Double Carbon-Graphite seal rings - Up to 1000°F (538C). Class IV

#### **FLOW CHARACTERISTICS:**

Equal Percentage, Linear

#### SHUTOFF CLASS (FCI / 70-2):

Standard trim, -20 to 572°F (-18 to 300°C) = Class V to 800°F (427°C) - Class IV

High-temp trim, To 1000°F(538°C), Class IV

#### **ACTUATORS:**

Standard:

Multi-Spring and Diaphragm

Optional:

Piston, Double Acting/Spring Return Hydraulic Flectric

Electro-Hydraulic

<sup>†</sup>Trim for Les Sonic II

### **M**ATERIAL SPECIFICATIONS

(Other Options - See Page 6)

#### "D" SERIES Material Specification - Standard, Balanced, Normal Temp

Item	Description	Material	Material Specification
1	Body/Bonnet	Carbon Steel	ASTM A216 GR WCC
2	Valve Plug	Stainless Steel	ASTM A487 GR CA 15 W/PTFE C300 spring loaded seal
3	Valve Stem	Stainless Steel	ASTM A479 TY 316
4	1/4" NPT, Hex Head, Plug in Bonnet	Carbon Steel	ASTM A105
5	SWG Gasket - Body Bonnet	Graphite / Stainless Steel	GRAPHITE + AISI 316L
6	SWG Gasket - Seat Ring	Graphite / Stainless Steel	GRAPHITE + AISI 316L
7	Stud - Body / Bonnet	Alloy Steel	ASTM A193 GR B7
8	Heavy Hex Nut - Body / Bonnet	Steel	ASTM A194 GR 2H
9	Cage	Stainless Steel	ASTM A351 CF8M
10	Seat Ring	Stainless Steel	ASTM A351 CF8M
11	Packing Ring	PTFE / Stainless Steel	Live Loaded PRFE V-Ring w/304 Stainless Steel Spring
12	Guide Bush in Bonnet	Stainless Steel	ASTM A276 TY 440C
13	Packing Follower	Stainless Steel	ASTM A479 TY 304
14	Packing Flange	Carbon Steel	ASTM A36, Zinc plated, Yellow passivation
15	Stud Packing	Stainless Steel	ASTM A193 GR B8
16	Hex Nut - Packing	Stainless Steel	ASTM A194 GR 8
17	Lock Nut Actuator	Carbon Steel	ASTM A36, Zinc plated, Yellow passivation
18	Plug Pin	Stainless Steel	ASTM A479 TY 316
19	Jam Nut	Stainless Steel	ASTM A194 GR 8
20	Seal Ring	PTFE / Optional Graphite	PTFE + 25% CARBON GRAPHITE + FLUOROLOY/ CARBON-GRAPHITE C300 spring loaded seal

NOTE: Common to all trim modules including Les-Cav/Les -Sonic unless otherwise listed

### **D-SERIES APPLICATIONS**

### **Applications**

**FEEDWATER CONTROL** regulates level of water in boiler drum. A 1 - 3 drum design is commonly based on HP, IP & LP applications. Valve receives water flow from pump and supplies water to drum to make up for that used to produce steam.

**FEEDWATER RECIRCULATION** valve insures that adequate flow is maintained through feedwater pump. The pump manufacturer calculates minimum flow required to prevent risk of premature pump failure due to bearings overheating or excessive thermal expansion of impeller blades.

#### **AUXILIARY STEAM PRESSURE REDUCTION**

- 1) Soot Blowers increase thermal efficiencies. Valve controls steam supplied to header from super heated source. PRV sees high pressure drop, intermittent operation, and rapid load swings.
- 2) Building Heat, extraction steam control.
- 3) Pegging, Deaerators use super heated steam to heat and remove air from condensate. Normally closed against high differential pressure.

**GLAND SEAL STEAM**, valves are used to maintain constant steam pressure in gland to seal air from turbine. Application requires HP steam, throttling a low flow at high DP. Typically these valves operate in a split range mode. One pressure signal either loads or vents the gland.

**ATTEMPERATOR SPRAY, SUPERHEAT, REHEAT** - Spray Control valve, is used for controlling steam temperature to turbine. The purpose of valve is to maintain a tight temperature band resulting in maximum efficiency.

- 1) Superheat spray, low DP, turndown, and accuracy are important.
- 2) Reheat spray, high DP, with Cavitation and seat leakage concerns as the valve operates close to the seat.
